**Subject:** Submission on Review of non-assigned amateur regulatory arrangements

608 Rookery Rd,  
Winkleigh TAS 7275

Dear Review panel,

I hereby support option C for the transition to a class license for non-assigned amateur operators. I would however also like to reiterate a request I made in an earlier submission on deregulation: given that amateur operators will have proven their capability to operate responsibly and competently, that the class license conditions explicitly permit an amateur operator to use a suitable transmitter on both amateur bands and the citizen band, providing the transmitter is used within the legal power limits, band widths and operating practices etc to the CB class license within those bands. I reiterate this as a blind operator who has limited access to accessible equipment. I would like this gray area to be explicitly allowed for.

Thank you.
