Subject: Increase in amateur radio power

Hi I wish to comment on the proposal to increase amateur radio output power. I feel increasing power output is not necessary. High power causes a number of problems. More interference with other services and with computers and stereo systems. I seemed to remember when I was first licensed it was stated to use only the power necessary to make the contact. I have managed to work 215 countries with a hundred watts and wire antennas. I would ask to not to pander to the keeping up with the Joneses syndrome and keep the amateur bands for scientific purposes and for experimental uses. Many thanks Owen Barriball V5ddd
