**Subject:** Review of non-assigned amateur and outpost regulatory arrangements.

To Whom it May Concern.

I am writing to have my view heard on the above subject. I will keep my answers short and to the point.

I agree with the establishment of a Class Licence for Radio Amateurs. I am concerned that investigations of interference TO amateur stations is going to be downgraded. The payment of a fee for a Class Licence should include complaints of interference to be heard and investigated. I fear we will just have to put up with the increasing interference to the amateur bands by unauthorised equipment without any recourse.

I support the proposal of allowing Standard Licence holders to have access to the 50-52 Mhz band in addition to the existing privileges of 52-54 Mhz.

I also support the proposal of higher power of 1Kw for Advanced Licence holders, I also support higher power for Standard Licence holders to 400wPEP, however I am not sure if this is part of the submission on this occasion.

I believe that the ACMA is making the transition to higher power much more complicated than it needs to be and that another scientific licence for higher power is just another obstacle to discourage the use of higher power.

I hope my view will be considered and I look forward to extra privileges in 2023.

Best Regards,

Greg Sylvia VK3MTV.
