EXPLANATORY NOTES 1

RADIO

1. MF AM radio in callsign order 5
2. VHF FM radio in callsign order 13
3. MF AM radio in frequency order 53
4. VHF FM radio in frequency order 61
5. All MF/VHF radio by area served 101
6. Digital Radio by area served 145

TELEVISION

7. Television in callsign order (by state) 151
8. Television in channel order 229
9. Television by area served 315

GENERAL INFORMATION

Emission standards 399
Australian MF AM Radio Stereo Standard (extract) 399
Australian VHF FM Radio Standard (extract) 399
Transmission Standard for the Australian Digital Radio Service (extract) 400
Transmission Standard for the Australian Digital Terrestrial Television Service (extract) 400
Digital radio frequency blocks and frequency limits 402
Television channel numbers and frequency limits 403

Explanatory notes

Under the *Australian Communications and Media Authority (Consequential and Transitional Provisions) Act 2005*, planning and management of the broadcasting services bands have been assigned to the Australian Communications and Media Authority (ACMA). Transmitters delivering broadcasting services in these bands are licensed under the *Radiocommunications Act 1992*.

This book has been prepared from the ACMA's records and contains information on licensed broadcasting transmitters as at the time of publication. Readers should note that while the entry of a broadcasting service in this edition indicates the existence of a transmitter licence for the service, it does not guarantee that the particular service is operating.

While every effort has been made to ensure the accuracy of these lists, the ACMA cannot guarantee them to be free from errors. The ACMA welcomes advice regarding any misdescriptions that may appear in the current edition, or suggestions regarding the formatting (including additional fields) that may help develop this publication in future. Any correspondence should be sent to:

Data Manager (Broadcasting)

The Broadcasting Services Bands

The parts of the radiofrequency spectrum designated as primarily for broadcasting purposes, and assigned by the Minister for planning under Part 3 of the *Broadcasting Services Act 1992*, are as follows:

526.5	-	1606.5	kHz	(inclusive)	137	-	144	MHz	(inclusive)
45	-	52	MHz	(inclusive)	174	-	230	MHz	(inclusive)
56	-	70	MHz	(inclusive)	520	-	694	MHz	(inclusive)
85	-	108	MHz	(inclusive)					

Television

All television services now shown in this book are digital.

Digital radio

Digital radio has been broadcasting in the licence areas of Adelaide, Brisbane, Melbourne, Perth and Sydney since mid 2009. The ACMA is now facilitating the rollout of digital radio in regional areas where licensees make the commercial decision that they wish to offer the service.

AM radio day/night switching

Some AM stations have been licensed to operate an alternative day-time specification in order to improve their day-time coverage. These AM radio services will have two entries on consecutive lines, the first being for night-time operation and the second for day-time operation. In order to make them easily identifiable, day/night switching entries are shown with a shaded background.

Multiple entries

Some services have multiple entries with slightly different technical details. These entries may indicate the presence of standby or interim transmitter facilities.

What is not included in this book

Low Power Open Narrowcasting (LPON) services

LPON services are open narrowcasting services that operate at powers not exceeding 1 watt (residential areas) or 10 watts (rural areas). LPON services are authorised under the Broadcasting Services Act as class licensed services.
The ACMA has released, until 31 December 2013, the sub-band 87.5 MHz to 88.0 MHz for use by these services.

Temporary Community Broadcasting Licences (TCBLs)

TCBLs are used to provide aspirant community broadcasters the opportunity to broadcast before a permanent community service licence is allocated. TCBLs can be allocated for periods up to a maximum of 12 months. In areas where there are more aspirants than frequencies, shorter licence periods or timesharing can be specified.

Medium Frequency Narrowband Area Service (MF NAS) stations

MF NAS stations operate in the frequency band immediately above the AM radio broadcasting band, from 1606.5 to 1705 kHz, and may be received by some standard broadcasting receivers.

Test transmissions

A test transmission licence authorises the use of a specific frequency for the purpose of testing, for example, to evaluate coverage or to assess any interference problems that may arise from the proposed use of the frequency.

Special events

A special event transmitter licence is issued for up to 28 days to provide a service in connection with a distinct and organised event of sporting, cultural or community significance.

HF broadcast services

HF broadcast services use frequencies outside of the broadcasting services bands, in the range 2.3 MHz to 26.1 MHz, to transmit over long distances and wide areas within Australia and overseas.

Content of the lists

As an aid to locating specific entry/entries, MF AM radio, VHF FM radio and television services are listed in three sequences:

> callsign order

> frequency or channel order

> area served order (MF AM and VHF FM radio are combined).

Digital radio services are listed in a separate section.

Callsign and channel number (Chnl)

With the exception of open narrowcasting services and digital radio services, all broadcasting services bands services are allocated a callsign by the ACMA. The callsign of a television service do not include channel numbers: these numbers are appended to television callsigns for convenience only.

ABC and SBS radio callsign suffixes have the following meanings: **RN** (Radio National), **RR** (Regional Radio), **FM** (Classic FM), **JJJ** (Triple J), **SBS** (Special Broadcasting Service), and **PB** (Parliamentary Broadcasting/News Radio).

Although the ACMA will continue to apply the current stylistic number and letter conventions for callsigns to allow ease of identification, callsigns have no legal status.

Purpose

National

Broadcasting services carrying the programs of the Australian Broadcasting Corporation, the Special Broadcasting Service, or the Parliamentary Broadcasting Network.

Commercial

Broadcasting services that provide programs that, when considered in the context of the service being provided, appear to be intended to appeal to the general public. These services are usually funded by advertising revenue and are operated for profit or as part of a profit making enterprise.

Community

Broadcasting services which are provided for community purposes, but are not operated for profit or as part of a profit making enterprise.

Retransmission

Services authorised, under section 34(1)(e) of the Broadcasting Services Act, to retransmit, unaltered, the services of national, community or commercial broadcasters.

High Power Open Narrowcasting (HPON)

Services whose reception is limited for some reason, by being targeted to special interest groups, or by being intended only for limited locations, or because they provide programs of limited appeal.

Category 1 Digital Radio Multiplex Transmitter (Category 1)

A category 1 digital radio multiplex transmitter licence is a licence that provides for the transmission of any or all of the following services:

A/ one or more digital commercial radio broadcasting services;

B/ one or more digital community radio broadcasting services;

C/ one or more restricted datacasting services.

Category 2 Digital Radio Multiplex Transmitter (Category 2)

A category 2 digital radio multiplex transmitter licence is a licence that provides for the transmission of any or all of the following services:

A/ one or more digital commercial radio broadcasting services;

B/ one or more digital community radio broadcasting services;

C/ one or more digital national radio broadcasting services;

D/ one or more restricted datacasting services.

Category 3 Digital Radio Multiplex Transmitter (Category 3)

A category 3 digital radio multiplex transmitter licence is a licence that provides for the transmission of:

A/ one or more digital national radio broadcasting services;

B/ one or more restricted datacasting services, where each relevant restricted datacasting licence is held by a national broadcaster.

Polarisation

For VHF FM radio and television, the polarisation may be **H** (Horizontal), **V** (Vertical), **M** (Mixed) or **D** (Dual). For MF AM radio and Digital radio, the polarisation is vertical.

Antenna pattern

Antenna radiation patterns may be **OD** (OmniDirectional) or **DA** (Directional Antenna).

Power/Effective Radiated Power (ERP)

Transmitter power (for MF AM radio) and ERP (for VHF FM radio, digital radio and television) are expressed in watts (suffix k indicates kilowatts). For directional antennas, ERP is in the direction of maximum radiation. In case of mixed polarisation, the maximum ERP specified applies to each plane of polarisation.

Co-ordinates of transmitter

Geographic co-ordinates of the transmitter location are specified in latitude (degrees, minutes, and seconds South) and longitude (degrees, minutes, and seconds East), to the nearest second, and referenced to the Geocentric Datum of Australia 1994 (GDA94).

General information

Emission Standards

For full details of broadcasting emission standards, please see

A/ Broadcasting Services (Technical Planning) Guidelines 2007 Appendix 1 Emission standard for the Australian Amplitude Modulation Sound Broadcasting Service.

B/ *Broadcasting Services (Technical Planning) Guidelines 2007* Appendix 2 Emission standard for the Australian Frequency Modulation Sound Broadcasting Service.

C/ Australian Standard *AS4943.1-2009 Digital Radio – Terrestrial broadcasting Part 1 : Characteristics of terrestrial digital audio broadcasting (T-DAB+) transmissions*

D/ Australian Standard *AS4599.1-2015 Digital Television – Terrestrial Broadcasting – Characteristics of digital terrestrial television transmissions.*

The following sections are extracts from those standards.

Australian MF AM Radio Stereo Standard

Australian MF AM radio stations may broadcast stereophonic sound. The Government approved a single standard based on the Motorola C-QAM system, after the then Department of Communications conducted a comprehensive test program in conjunction with representatives of the broadcasting and receiver industry.

THE C-QAM SIGNAL

The AM stereo system adopted by Australia is fully compatible with existing monophonic receivers. The amplitude of the transmitted carrier frequency is modulated by the sum of the left and right channel signals. The stereo information is encoded in the instantaneous phase of the transmitted carrier frequency. At the transmitter, the carrier frequency is divided into two components which are separated by 90 degrees relative to each other, that is, they are in quadrature.

One component is modulated by the sum of the left and right channel signals, while the other is modulated by the difference between the left and right channel signals. Thus, two double sideband suppressed carrier signals in quadrature are generated. These signals are then added vectorially to the carrier. The modulated component due to the sum signal is in phase, and that due to the difference is in quadrature, with the carrier.

Australian VHF FM Radio Standard

Australia uses the ‘pilot-tone’ system commonly used throughout the world. Principal characteristics of the system used in Australia are set out below:

Frequency Range:	88 – 108 MHz (i)
Channel Centre Frequencies:	88.1, 88.3, ... 107.7, 107.9 MHz
Deviation:	75 kHz
Pre-emphasis/de-emphasis:	50 μS
Stereo Channel Subcarrier Frequency:	38 kHz
Pilot Frequency:	19 kHz

The stereo baseband signal occupies a frequency range of 53 kHz.

(i) Note : low power open narrowcasting services are licensed to operate in the band 87.5 MHz to 88.0 MHz.

ANCILLARY COMMUNICATIONS SERVICES

Ancillary communication services (ACS) may also be added to the main program channel. The emission standard for the Australian Frequency Modulation Sound Broadcasting Service permits use of specified sub-carrier frequencies on condition that:

A/ the use of such sub-carriers does not cause interference to or degradation of the main channel or other channels

B/ the deviation of the main carrier due to the entire baseband signal, including all ACS signals, does not exceed ±75 kHz and

C/ the deviation of the main carrier by any one ACS sub-carrier alone does not exceed ±7.5 kHz.

The Australian Digital Radio Standard

Radiated signal characteristics

Planning for Digital Radio Broadcasting (DRB) is based on the Australian Standard AS4943.1-2009 Digital Radio – Terrestrial broadcasting Part 1 : Characteristics of terrestrial digital audio broadcasting (T-DAB+) transmissions. This standard is based on technical content of relevant European Telecommunications Standards Institute (ETSI) standards, but includes a number of variations specific to Australia.

Digital Radio frequency blocks.

The width of the digital radio frequency block is 1.536 MHz. Digital radio services are planned in the same band as television band III services, with 4 frequency blocks allocated to each television channel. The allocation scheme for digital radio frequency blocks is shown on page 402.

The centre frequency of the digital radio frequency block is shown in the service listings in this book. It should be noted that for implementation reasons, digital radio multiplex transmitter (DRMT) licensees may choose to operate with a maximum +/- 80 kHz offset (in multiples of 16 kHz) from the nominal channel centre frequency.

Modulation schemes

The Australian digital radio service is planned to reference modulation parameters of Transmission Mode I and Protection Level 3 using differentially encoded Quadrature Phase Shift Keying (D-QPSK), as defined in the ETSI standard ETSI EN 300 401 V1.4.1. A DRMT licensee may elect to operate with other modulation parameters to improve coverage or capacity. However, the licensee will not be entitled to protection greater than that afforded by the reference modulation.

Carriers and guard interval

The digital radio transmission standard for Transmission Mode I allows for the use 1536 carriers with a guard interval of 246 μS.

The Australian Digital Terrestrial Television Standard

Radiated signal characteristics

Planning for Digital Terrestrial Television Broadcasting (DTTB) is based on the Australian Standard AS4599–1999 *Digital television – Terrestrial broadcasting – Characteristics of digital terrestrial television transmissions.* This standard is based on the European standard for terrestrial digital video broadcasting (DVB-T), but includes a number of variations specific to Australia.

Television channels

The width of the digital television channel is 7 MHz. Digital television services are planned using the same channel allocation scheme as for the former analog television service. However, not all of these channels are used for digital television as the following table illustrates:

VHF Band I	Channels 0, 1 and 2	Not suitable for digital television broadcasting transmissions as these channels are prone to interference from electrical noise.
VHF Band II	Channels 3, 4 and 5	Used for FM radio and thus no new television services in Australia will be planned using these channels.
VHF Band III	Channels 5A – 12	Suitable for digital transmissions, although no new television services in Australia will be planned using channel 5A as it has been allocated internationally to other services.
UHF Band IV	Channels 28 – 35	Suitable for digital transmissions.
UHF Band V	Channels 36 – 51	Suitable for digital transmissions.
UHF Band V	Channels 52 – 69	"Digital Dividend" spectrum reallocated for other uses.

The channels allocated for Australian digital television services are shown on page 403.

Modulation schemes

DVB-T offers flexibility in the use of transmission mode by supporting a range of modulation schemes, code rates and guard intervals to accommodate different broadcasting requirements. For the purpose of digital television planning, the reference modulation listed in the table below will be employed. However broadcasters have the option of using other modulation schemes to improve DTTB coverage or data capacity.

Modulation	Code Rate	C/N	Guard Interval	Carrier Mode
64–QAM	2/3	20 dB	1/8	8k

Carriers and guard interval

The DVB-T transmission standard allows for the use of either 1705 carriers (known as '2k' mode), or 6817 carriers ('8k' mode). Australian DVB-T receivers are expected to be capable of receiving both 2k and 8k modes.

The centre frequency of the digital television channel is shown in the service listings in this book. It should be noted that for implementation reasons, broadcasters may choose to operate with a ± 125 kHz offset from the nominal channel centre frequency.

Digital Radio (DAB) Frequency Blocks

Digital Radio (DAB) Frequency Block Identifier	Australian Television Channel Number	Centre Frequency (MHz)	Frequency Range (MHz)
5A	6	174.928	174.160 - 175.696
5B	6	176.640	175.872 - 177.408
5C	6	178.352	177.584 - 179.120
5D	6	180.064	179.296 - 180.832
6A	7	181.936	181.168 - 182.704
6B	7	183.648	182.880 - 184.416
6C	7	185.360	184.592 - 186.128
6D	7	187.072	186.304 - 187.840
7A	8	188.928	188.160 - 189.696
7B	8	190.640	189.872 - 191.408
7C	8	192.352	191.584 - 193.120
7D	8	194.064	193.296 - 194.832
8A	9	195.936	195.168 - 196.704
8B	9	197.648	196.880 - 198.416
8C	9	199.360	198.592 - 200.128
8D	9	201.072	200.304 - 201.840
9A	9A	202.928	202.160 - 203.696
9B	9A	204.640	203.872 - 205.408
9C	9A	206.352	205.584 - 207.120
9D	9A	208.064	207.296 - 208.832
10A	10	209.936	209.168 - 210.704
10B	10	211.648	210.880 - 212.416
10C	10	213.360	212.592 - 214.128
10D	10	215.072	214.304 - 215.840
11A	11	216.928	216.160 - 217.696
11B	11	218.640	217.872 - 219.408
11C	11	220.352	219.584 - 221.120
11D	11	222.064	221.296 - 222.832
12A	12	223.936	223.168 - 224.704
12B	12	225.648	224.880 - 226.416
12C	12	227.360	226.592 - 228.128
12D	12	229.072	228.304 - 229.840

Notes:

1/ This table is for information only. For more detail, refer to *ETSI TR 101 496-3 V1.1.2 (2001-05) Digital Audio Broadcasting (DAB); Guidelines and rules for implementation and operation; Part 3: Broadcast network*.

2/ This table excludes DAB frequency blocks 10N, 11N and 12N as these are not applicable to Australia.

3/ Under the ACMAs *Planning principles for the expansion of digital radio to regional Australia,* digital radio services will generally be allocated on a 6/2 frequency allotment scenario, with the national broadcaster frequency blocks being 9C and 8B, while frequency blocks 8A, 8C, 8D, 9A, 9B and 9D will be available for allotment in each licence area to multiplexes carrying commercial and community services.

Television Channel Numbers and Frequency Limits

Australian Television Channel Number	Channel Planning Block	VHF/UHF Frequency Band	Centre Frequency (MHz)	Frequency Range (MHz)

Notes:

1/ In the *Clearing the digital dividend - Decisions on planning principles for restacking digital television channels – May 2011,* the decision was made to adopt the block planning approach, with 5 blocks of 6 channels, as shown in the table. Channels 9 and 9A may be used for digital TV in some remote areas.
