Subject: RE: 【Australia】 Radiocommunications equipment rules

Dear Sir or Madam,

Regarding the proposed "Radiocommunications Equipment (General) Rules 2021" (see link below also).

<https://www.acma.gov.au/consultations/2021-03/radiocommunications-equipment-rules-consultation-072021>

I had reviewed the documents at the above link however am seeking further clarification please.

My understanding is that the proposed **Radiocommunications Equipment (General) Rules 2021** will be taking over from the existing **Radiocommunications Equipment Rules**.

While existing standards and labelling notices will be saved as equipment rules under the new arrangements, some **new** equipment rules will be necessary to maintain 4 objectives:

- to ensure the application of sanctions for possession, operation or supply of devices that do not comply with mandated standards
- to enable the ACMA to provide permits for the use, possession and supply of non-standard devices
- to ensure the continuation of prohibitions and obligations for labelling equipment that complies with standards
- to maintain existing limitations on the supply of mobile phone repeaters, to ensure that such devices may only be supplied to people licensed to operate them.

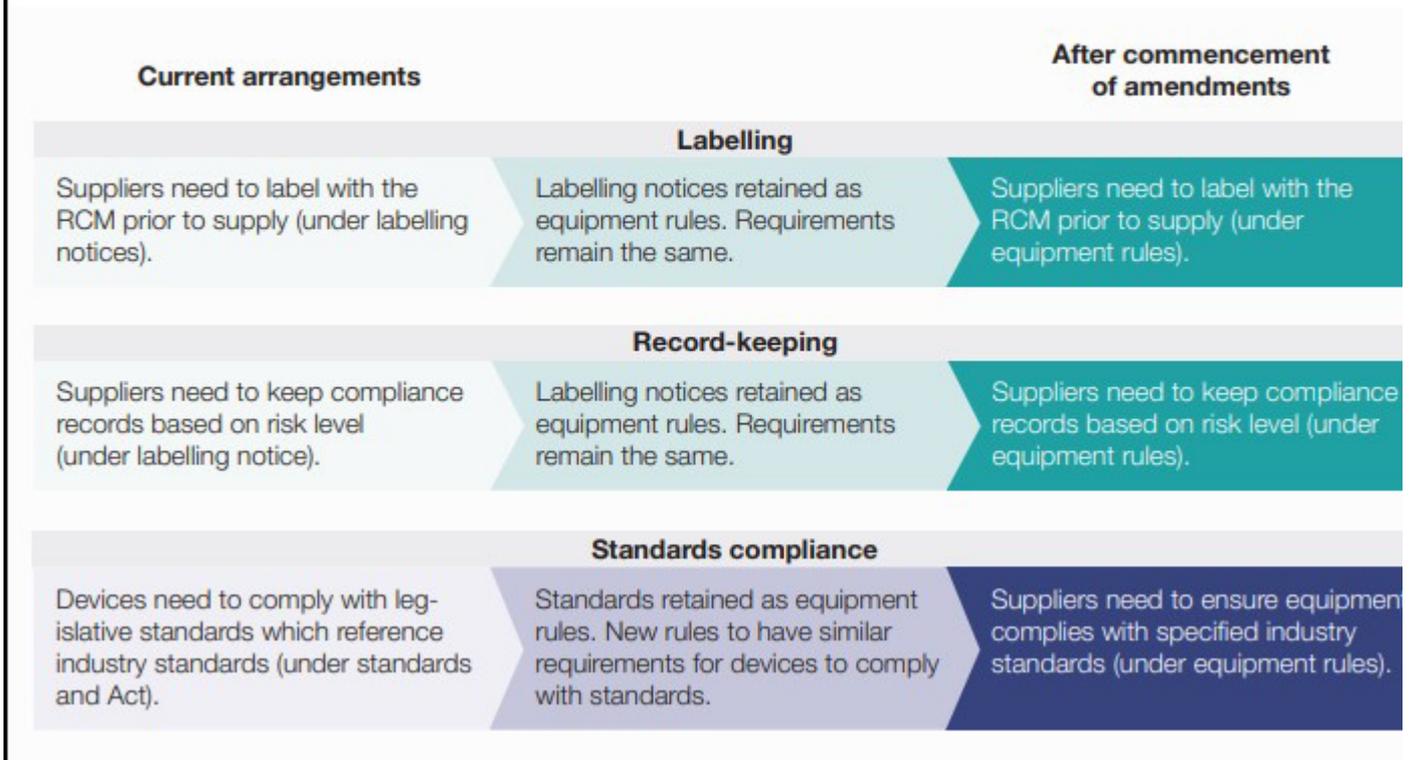

[From a supplier perspective though once these changes to the equipment rules have been implemented can you please advise how our obligations would vary in terms of the points below?](#)

- Technical standards
- Testing
- Record keeping
- Labelling

In relation to the above points my understanding is that we would not be affected and should continue to ensure that our products comply with the applicable technical standards i.e. Radiocommunications standards, sign and keep records e.g. declaration of conformity and label our products e.g. RCM mark as we have currently been doing already.

[Can you please advise if my understanding is correct?](#)

Changes to radiocommunications equipment rules

Regards,
